
CLAIMS

What is claimed is:

1. An emission bag, for covering a nose and mouth in such a manner that pathogens transmitted from the nose and mouth will be confined to an interior of the emission bag, comprising:
 - a piece of material with an opening; and
 - a bag attached with the piece of material and opening, such that an entrance to an interior of the emission bag is through the opening.
2. An emission bag as set forth in claim 1, further comprising a top film attached with the emission bag, whereby manipulating the top film exposes the opening.
3. An emission bag as set forth in claim 2, further comprising a bottom film attached with a bottom portion of the piece of material, whereby manipulating the bottom film exposes the bag.
4. An emission bag as set forth in claim 3, wherein the piece of material is constructed from a material selected from a group consisting of plastic, metal, and paperboard.
5. An emission bag as set forth in claim 4, wherein the piece of material has perforations, allowing it to fold along the perforations and thereby creating two opposing sides.
6. An emission bag as set forth in claim 5, further comprising an enclosure apparatus attached with the piece of material, such that when the piece of material is folded along the perforations, the enclosure apparatus on two opposing sides come into contact with each other and thereby seal the emission bag.

7. An emission bag as set forth in claim 6, wherein the enclosure apparatus is selected from a group consisting of adhesive tabs, tape, Velcro, glue, and twist-ties.
- 5 8. An emission bag as set forth in claim 7, wherein the bag is constructed of a material selected from a group consisting of plastic, paper and cloth.
9. An emission bag as set forth in claim 8, wherein the bag has small perforations allowing the bag to breathe.
- 10 10. An emission bag as set forth in claim 9, wherein the small perforations are medicated with an anti-septic on the interior of the bag, such that emissions are sterilized upon passing through the small perforations from an interior of the bag to an exterior of the bag.
- 15 11. An emission bag as set forth in claim 10, wherein the bag has an entrance and a base and the entrance has an area and the base has an area, where the area of the entrance is smaller than the area of the base.
- 20 12. An emission bag as set forth in claim 11, further comprising a wet napkin positioned within the interior of the emission bag.
13. An emission bag as set forth in claim 13, wherein the wet napkin is medicated.
- 25 14. An emission bag as set forth in claim 1, further comprising a bottom film attached with a bottom portion of the piece of material, whereby manipulating the bottom film exposes the bag.

15. An emission bag as set forth in claim 1, wherein the piece of material is constructed from a material selected from a group consisting of plastic, metal, and paperboard.
- 5 16. An emission bag as set forth in claim 1, wherein the piece of material has perforations, allowing it to fold along the perforations and thereby creating two opposing sides.
- 10 17. An emission bag as set forth in claim 16, further comprising an enclosure apparatus attached with the piece of material, such that when the piece of material is folded along the perforations, the enclosure apparatus on two opposing sides come into contact with each other and thereby seal the emission bag.
- 15 18. An emission bag as set forth in claim 17, wherein the enclosure apparatus is selected from a group consisting of adhesive tabs, tape, Velcro, glue, and twist-ties.
- 20 19. An emission bag as set forth in claim 1, wherein the bag is constructed of a material selected from a group consisting of plastic, paper and cloth.
- 25 20. An emission bag as set forth in claim 1, wherein the bag has small perforations allowing the bag to breathe.
- 25 21. An emission bag as set forth in claim 20, wherein the small perforations are medicated with an anti-septic, such that emissions are sterilized upon passing through the small perforations from an interior of the bag to an exterior of the bag.

22. An emission bag as set forth in claim 1, wherein the bag has an entrance and a base and the entrance has an area and the base has an area, where the area of the entrance is smaller than the area of the base.

5 23. An emission bag as set forth in claim 1, further comprising a wet napkin positioned within the interior of the emission bag.

24. An emission bag as set forth in claim 23, wherein the wet napkin is medicated.
